Klemmer et al., 2026

Session 01 · 2026-11-17

2026-11-17

Session details

Session	1
Date and time	2026-11-17, 11:00–12:15
Facilitator	Carlos Granell
Note-taker	Carlos Granell

Attendees: *Name 1, Name 2, Name 3, …* (*n* = ?)

Apologies: *Name, …*

Paper discussed

Klemmer, K., Rolf, E., Rußwurm, M., Camps-Valls, G., et al. (2026). *Earth Embeddings: Toward artificial intelligence-centric representations of our planet.* IEEE Geoscience and Remote Sensing Magazine. <https://doi.org/10.1109/MGRS.2026.3710416>

Pick type: regular · **Pages:** 14

Why it was chosen (from the facilitator's announcement):

This paper explains Earth embeddings, vector representations of geographic locations, as a new way to store and analyse geospatial data, which goes to the heart of how GIScience, leveraged by Geospatial Foundation Models, represents space.

Summary of the paper

Three to five sentences in the group's own words: research question, data, method, main result.

Discussion

Scientific contribution

- *What is new? Is the claim supported by the evidence?*
- *Strengths:*
- *Weaknesses / limitations (acknowledged or not by the authors):*

Methods, design and validation

- *Is the method appropriate to the question? Could it be reproduced (data, code, parameters)?*
- *How is the result validated? What alternative design would we have chosen?*

Writing and presentation

- *Structure, clarity of the abstract and introduction, use of figures and tables.*
- *Something worth imitating in our own papers:*
- *Something to avoid:*

Members' questions and critiques

- *Question 1*
- *Question 2*

Key takeaways

1. *Main lesson for critical reading*
2. *Main lesson for our own writing or research practice*
3. *…*
